## COMMON PARTS LISTS FOR RESISTORS & CAPACITORS

<Issued on June, 1987>

On this parts list, ten sorts of resistors, & seventeen sorts of capacitors, which are commonly used in the Sansui products, are listed. Since these resistors & capacitors on this list are omitted from service manual, please confirm shape, resistance or capacitance value, schematic diagram, and this list on the parts when replacing the parts with trouble. In addition, please pay attention to fill out the name and stock number (8 digit) of parts when order.

With the issue of this parts list, please abandon the "Common Part List for Resistance & Capacitors" previously issued.

### Notice:

Capacitors & Resistors on this parts list include one not to be used in Sansui products, therefore they can not be supplied although ordered.

## NOTE

◆ Common resistors and capacitors in this parts list substitute for other types of resistores and capacitors.

1) The following list shows relations between original and substitution parts.

COMMON RESISTORS (Substitute Resistor) ORIGINAL RESISTOR

- Carbon Resistor 1/6W, Tolerance  $\pm 5\%$  (J) .... •Printed Resistor
- Carbon Resistor 1/3W, Tolerance  $\pm 5\%$  (J) .... •Solid Resistor 1/4W
- Cement Resistor 5W, Tolerance  $\pm 10\%$  (K) .... •Cement Resistor 3W
- Low Leak Electrolytic Capacitor 50V..... •Low Leak Electrolytic Capacitor 25V

2) There are some types of lead wires of resistors and capacitors. One is straight lead wire type, and others are formed lead wire type.

As the straight lead wire type is selected for common resistors and capacitors, please substitute the straight lead wire type for the formed lead wire type.

3) Standard resistors & capacitors supplied as substitute (on this list) may be different in configuration and color, from those used in set.

• Notice for replacement of printed resistor and silver pattern

The printed resistor of carbon resine and the printed silver foil pattern are coated on some printed circuit board.

And it is impossible to replace those parts. Therefore, please keep following notice when repairing or ordering parts.

1. When repairing the printed resistor, cut off center portion of the printed resistor to make complete open circuit.  
Then solder 1/6W type carbon resistor between copper patterns at both ends of the printed resistor.
2. When repairing the printed silver pattern, solder a jumper wire between copper patterns at both ends of the printed silver pattern.
3. As conductor path is easy to break, do not put any wires through holes of conductor path.
4. Do not heat up any conductor path.

FOR EXAMPLE Silver pattern Printed resistor

## 2-15. Ceramic Capacitor 50V, Temperature Compensation

- 1) N.P.O. No variation with temperature.  
P.P.M. (Parts Per Million) 1/1,000,000.
- 2) The ordinary ceramic capacitor increase its capacitance with temperature rise, however, capacitor for temperature compensation decrease its capacitance or does not vary with temperature rise.

For example:

$$\text{Capacitance} = \frac{-150(t-25^{\circ}\text{C})}{1 \times 10^6}$$

x C (pF)  
[Orange type]

- 4) Indications of capacitors are same as those of standard capacitors.

•Note: Replacing chip capacitors

- 1) Since there is no indication of capacity value on chip capacitors, refer to schematic diagram for discrimination of its value.
- 2) Special parts such as the temperature compensation, etc. are not listed on this list.  
In such case, please refer to service manual.

- 3) When replacing chip capacitors, use low wattage (about 20W ~ 30W) or special soldering iron for the chip parts in order to avoid unnecessary and/or heat damage.
